To Whom It May Concern,

NESCO Specialty Rentals maintains one of the utility industry's largest rental fleets and service networks, serving the United States and Canada. Our inventory includes aerial devices, cranes, diggers, drills and stringing gear, to blocks, aftermarket parts, tools, and accessories. We provide quality machinery and professional expertise throughout our service and rental divisions, serving thousands of customers in dozens of end markets/industries.

Our 65 service department locations provide dedicated technicians, sales staff, and expert consultants for customers' specific jobs. Our fleet consists of over 20 different product lines, offering unique rental solutions for track vehicles, CDL equipment, back-easement options, all-wheel drive, among other units. We represent some of the premier brands in the utility industry including Terex, Versalift, Condux-Tesmec, Hogg & Davis, Skylift, SDP, Manitex Cranes, Prinoth, Elliott, Samson Rope, and more. All of our equipment is regularly tested for safety and compliance. Orders can also be catered to fit our customers' specific project needs.

Shortly after our acquisition of Truck Utilities in November of 2019, we were introduced to the team at Zeus Electric Chassis. We have found the team to be visionaries in the electric truck chassis market, who have put their designs into action. I have personally witnessed the assembly of their prototypes in various stages and am impressed with quality of the product they plan to bring to market. NESCO Specialty Rentals will be an early adopter and customer of their products when they start rolling off the assembly line. Some of our end customer markets are clamoring for an alternative to traditional internal combustion engines (ICE), especially those with specific clean vehicle mandates. We plan to utilize Zeus Electric Chassis as part of our solutions offering to those customers and markets.

Best regards,

Robert Blackadar  
President, NESCO Specialty Rentals
